EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science

May 2028

The University of Texas at Dallas

Bachelor of Science in Computer Science; GPA: 3.95/4.0.

May 2024

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL, HTML, CSS
Framework & Testing: Spring Boot, Angular, JUnit 5, Jest, Cypress, WireMock
Distributed System & Cloud: Kafka, Redis, Oracle, AWS (S3), Kubernetes, Microservices, Hexagonal Architecture
Tools & Patterns: Git, Maven, Swagger/OpenAPI, Resilience4j, ShedLock, CI/CD

EXPERIENCE

Full-Stack Software Engineer – Fidelity Investments

Jun 2024 – Present

- Engineer full-stack features across 6 Spring Boot **microservices** (Java 21, Angular, Kafka, Oracle, Redis) in **hexagonal architecture** powering an enterprise securities pricing platform
- Own a pricing workstream end-to-end in production as part of a core team – design alerting for all failure scenarios, monitor daily run metrics, and resolve incidents on-call within a 24-hour SLA
- Design 19+ configurable validation rules with parallel async execution, feature-flag gating, and distributed locking, preventing pricing errors from propagating to downstream systems
- Automate a recurring manual business process via a scheduled service with failover API, eliminating human error and saving ~8 hours/week of operational overhead
- Deliver features end-to-end - REST APIs, Kafka event pipelines, and Angular UI - with OpenAPI contract-first development and 90%+ test coverage (JUnit 5, Cypress, WireMock)
- Generate services and models directly from OpenAPI specifications, cutting API-related development time and eliminating a recurring class of manual integration errors
- Optimize the Angular / TypeScript front-end, reducing bundle size by 10% and improving load performance and maintainability
- Drive **AI-assisted development** adoption (Claude Code, GitHub Copilot) - present to engineering leadership and coach teammates on workflows to accelerate delivery

Software Engineer Intern – SVTech

Jun 2022 – Sep 2022

- Built a RESTful API in Java and Spring Boot integrating multiple third-party facial-recognition providers, improving identification accuracy by 20% over a single-provider baseline
- Deployed the service to an Ubuntu server and validated integration with existing system using Maven, Git, Postman
- Effectively utilized technologies such as Java, GitHub, VS Code, Spring Boot, Insomnia, Postman, and Maven to drive project success and contribute to the company's growth

PROJECTS

Weathered Cloud – HackDFW

Sep 2022

- Built a rain-prediction app with a machine-learning model (80%+ accuracy) on AWS infrastructure, integrating the Google Maps Directions API to bring response latency down to ~700ms
- Developed a real-time heatmap visualization layer using JavaScript, React Native, and Google Maps API highlighting high-probability rainfall areas

Behavior Predictor – ASA Southern Methodist University DataFest

Apr 2022

- Competed and ranked 1st among 15 teams at DataFest by analyzing large datasets and using visualization techniques to accurately predict potential negative behaviors with over 80% accuracy
- Utilized Python to conduct complex data analysis of Play2Prevent's user behavior, resulting in the development of predictive models with over 90% correlation accuracy
- Developed and implemented a unique matrix system that analyzed user habits from Play2Prevent's dataset, resulting in actionable insights that improved the overall effectiveness of their game-based prevention programs

ACHIEVEMENTS

Intermediate Cybersecurity: completed a 10-week course about Cybersecurity from CodePath

May 2024

JPMorgan Software Engineering Program: used data visualization software to monitor stock price trends

Apr 2023
